afternoon. Mrs. Robinson's subject was A Personal Glimpse of the Panama Exposition. The speaker analyzed her first view of the exposition from the Presidio, situated on a high hill, as a great walled city, full of color, against the background of the blue waters of San Francisco bay. The walled effect Mrs. Robinson discovered was gained by a hedge of ice plants, which makes for an old wall, covered with climbing vines, in which arches were introduced at intervals, giving on the grounds proper. The tower of jewels, 435 feet high, the Horticultural palace, the South gardens, Festival hall, the eight exhibition buildings, the avenue of palms, the Massachusetts building and the terrace by the sea were all mentioned in detail and colored photographs and prints of the points of interest shown. Mrs. Robinson closed her lecture with a tribute to woman, in which she said that although there was no woman's building, she saw side by side with the work of man the work of woman, equal to his in every respect.

In every respect.
